

# Virtual Flashboard System

The Arcade Virtual Flashboard System is part of our Arcade gaming platform.

The platform is our latest generation of gaming system that provides cost-effective solutions while also taking advantage of state-of-the-art technology.

Our Virtual Flashboards come in a variety of form factors using commercially available High Definition TVs. The system will even accommodate projection systems as well.

The system will accommodate three different screen layouts:

- Full Flashboard that will display a regular flashboard, patterns in play, name of the pattern, payout amount, web cam feed for next ball to be called and a scrolling message to be used in making announcements to your players.
- Partial Flashboard that will display a regular flashboard, patterns in play, name of the pattern and payout amount.
- Web Cam where a web cam feed is provided to display the next ball to be called.

In addition to using the system for bingo playing purposes the monitors can also accommodate inputs to broadcast other video input such as TV programs, sporting events and other presentations.

## Advantages:

- Newer Technology
- Impressive Graphics
- Less Cost – fully equip your hall at a fraction of the cost it would take to equip with standard light bulb flashboards which always seem to have burned out light bulbs.
